MarsVM - Cookie Policy

Basic information about cookie use on the MarsVM website.

Effective date: 10 May 2026

Document type: Cookie policy

This document explains how MarsVM uses cookies and similar technologies, why they are needed and how users can manage them.

1. Awareness of rules and document relationship

• The user must read this document before using the service. Lack of knowledge of rules, policies or technical limits does not excuse violations.

• MarsVM documents complement each other. If a general policy and a specific document differ, the more specific or stricter rule applies.

• If the user is unsure how a rule applies, they should contact support before running the service or activity.

2. What cookies are

Cookies are small text files or similar technologies stored in the user's browser. They help the website work, remember basic choices and protect the user account.

3. What cookies MarsVM uses

• Necessary cookies: sessions, login, CSRF protection and security functions.

• Functional cookies: website language, basic panel settings and remembering the cookie banner choice.

• Analytics or marketing cookies are used only if they are actually deployed and if there is a valid legal basis or consent.

4. Legal basis and retention

• Cookie use is governed by Czech and European Union law.

• Necessary cookies may be used without consent where they are required for the service to work.

• Retention depends on the cookie type. Session cookies usually expire when the browser is closed or the user logs out.

5. Third parties and changes

• If MarsVM uses third-party services, those services may use their own cookies under their own policies.

• Users can manage cookies in browser settings, but disabling necessary cookies may limit service functionality.

• MarsVM may update this policy, especially when website features or legal requirements change.
